Clinical Notes -

Industrial - Employed at Sewing. Instructress State: This girl is well liked and is a leader, but likes to show off and is thoughtless of others. She is interested in her work, and shows interest in other occupations, not because she wishes to do them but to put in time. Is a day-dreamer, talkative, late in starting and prefers amusement to work. She is a slow worker - could be much faster if she wished. She is truthful for the most part, but like most of these girls she twists the truth to suit the occasion. She putters with her work and her mind seems to be preoccupied, but what work she does turn out is fairly well done.

April 25, 1931.

Diagnosis - Moron.Etiology - Heredity.

([REDACTED] Reg.N.)
Social Service Nurse.
